Critique from a Turkish Trader's View and Sanctions Impact

How much, for what stake and how a Turkish granule trader would engage — under the tightened sanctions of Sept 2026

September 2026

Exchange rate: 1 USD = 235,000 Toman (28 Sep 2026). All figures are estimates to be confirmed by quotes and contracts.

1. Sanctions and banking situation (Sept 2026)

• UN sanctions returned via snapback in Sept 2025; the list names 43 people and 78 entities.

• In Aug–Sept 2026 the US launched 'Operation Economic Outcast' and sanctioned Turkey's Golden Global Bank for moving Iranian funds; the Treasury Secretary said more banks may follow.

• On 23 Sept 2026 Turkey ordered banks to report and delay transactions of UN-listed persons and firms via MASAK.

• Practical result: no mainstream Turkish bank will openly process Iran-linked payments; letters of credit are practically impossible.

Explanation: US petrochemical sanctions cover Iranian polymer products; recycled PE/PP granule may be viewed the same way. The main risk falls on the Turkish side, not on us.

2. What does a Turkish trader look at?

Factor	Reality
Recycled granule price in Turkey	Recycled PP $0.85–1.50/kg; virgin $1.40–2.00
Granule price in Iran	105–135k Toman ≈ $0.45–0.57/kg
Price gap	~$0.40–0.60/kg — attractive, but part is eaten by sanctions risk, freight and customs
His risk	SDN listing, bank account closure, losing European customers

Explanation: Our estimate: because of the risk, a Turkish trader would pay at most 30–40% below Turkish market price, i.e. ~$0.55–0.70/kg delivered at the border. This is an estimate to be confirmed in real negotiations.

3. How much, what stake, and how?

Model	Typical amount	Stake / terms	Likelihood
Trial purchase (no investment)	1–2 containers (20–50 t) ≈ $15–30K	Payment after quality inspection	High
Long-term offtake	50–200 t/month	6-month fixed price, $0.55–0.70	Medium
In-kind (machinery)	$50–150K	20–30% stake + first right to buy output	Low–medium
Cash / joint venture	$200K+	40–51% stake, financial control, 35%+ USD return	Very low (in current conditions)

Explanation: The most realistic start is a trial purchase, then an offtake contract. Turkish cash investment is nearly impossible now, and the plan must not depend on it.

Exchange rate: 1 USD = 235,000 Toman (28 Sep 2026). All figures are estimates to be confirmed by quotes and contracts.

4. How should payment work?

Method	Pro	Con / risk	Verdict
Bank transfer / LC	Transparent	Practically closed	✗
Barter (granule for Turkish machinery/parts)	No money transfer	Complex valuation and customs	✓ Best
Netting with an Iranian importer of Turkish goods	Lira stays in Turkey, rial in Iran	Needs trusted counterparty; compliance risk	✓ With caution
Exchange house / hawala	Fast	Direct target of new sanctions	⚠ High risk
Crypto / third-country company	Access	UAE also under pressure; high legal risk	✗ Not recommended

• Proposal: 30% before loading and 70% after independent quality inspection at the border; or full barter for washing and melt-filter machinery.

• All parties must be screened against the US SDN and UN lists before any deal; no US dollars.

• Before exporting, Iran's rules on granule export and FX repatriation must be checked with customs.

5. Critique of the plan under the new conditions

Plan element	Before	Now	Fix
Turkish partner with 15–20% stake	5/10	2/10	Turn into buyer/supplier, not shareholder
FIPPA to protect foreign capital	6/10	3/10	Only if sanctions ease
Granule export to Turkey	6/10	4/10	Side revenue, not the plan's base
Iranian domestic market	7/10	8/10	Plan's base; expensive virgin polymer raises demand
Iranian equipment (Pendar)	7/10	9/10	Biggest advantage under sanctions

Explanation: Conclusion: the plan must run fully domestically, with no dependence on foreign money. The Turkish link — as trial purchases and barter — is an upside, not a pillar. The Turkish letters and deck should shift from 'investment' to 'trade cooperation and purchasing'.

6. Concrete offer to a Turkish trader

• Step 1: 25 kg free sample + lab sheet (MFI, moisture, ash).

• Step 2: one 20 t trial container, paid after inspection.

• Step 3: 6-month contract, 50 t/month at a fixed price.

• Step 4: if successful, barter machinery against future granule.

Exchange rate: 1 USD = 235,000 Toman (28 Sep 2026). All figures are estimates to be confirmed by quotes and contracts.
